

ZeroMQ:

First start msg_server

Run group server

Then run user1, user2

Then register groups from group.py

Then perform suitable actions from user1 or user2

RabbitQ:

1)first start the rabbitmq server

2) run server.py and connect it to rabbitmq

3) run youtuber.py with appropriate command to upload the video on to the server

4) run user.py with appropriate command to subscribe to the youtuber. You run user.py as many times to subscribe to the youtuber.

5) run youtuber.py to upload the video to the server ,than notifications to the subscribers at the same time
